

Virtual new NED

NED, the UK's National Equine Database, offers users a more speedy user experience following its relocation from the existing older servers to a new "virtual" server.

Following on from the extension of NED's contract to supply passport data management services to Defra, the organisation is looking to continue to better users' experience of the site in terms of speed and information available.

The links between horses on NED, as supplied by over 100 organisations, continues to be improved and with some new interactive features planned for the autumn and festive season. So it's all systems go for NED.

We are just judging our final 2011 Centre Stage photo upload competition, so if you uploaded an image of your horse during September, he or she could enjoy being Centre Stage for a whole month!

For regular updates, follow National Equine Database on Facebook.
